NEBIYOU DANIEL

Backend Engineer | AI Developer

Addis Ababa, Ethiopia | +251 938 307 338 | dnebiou@gmail.com | mesobaiprojects@gmail.com
nebiyou-danieil.vercel.app | github.com/nebioudaniel | linkedin.com/in/nebyiou-d-5086b8315

PROFESSIONAL PROFILE

Self-taught software developer with university education, focused on backend systems, APIs, databases and AI integration. Builds complete products end to end: founded Bedebo (50+ users, 5 paid upgrades) and is building Mesob AI, a private AI platform in Go. Has delivered data pipelines, APIs and dashboards on teams in Ethiopia and the US. Learns unfamiliar tools from official documentation and ships working versions. Cares about security, reliability and maintainable code.

TECHNICAL SKILLS

Languages: Go, Python, TypeScript, JavaScript, SQL (raw PostgreSQL)

Backend and APIs: FastAPI, REST, WebSockets, GraphQL, Microservices, Authentication, RBAC, Webhooks, Data Ingestion Pipelines

AI and LLMs: RAG Pipelines, LLM Integration, llama.cpp (local inference), OpenAI, Claude and DeepSeek APIs

Databases: PostgreSQL, Supabase, Neon, Prisma, Schema Design

Frontend: React, Next.js, Solid.js, Tailwind CSS

Infrastructure and Tools: Docker, Linux, Git/GitHub, AWS, Vercel

PROFESSIONAL EXPERIENCE

Founder and Software Engineer, Mesob AI

Sep 2025 – Present | *Addis Ababa, Ethiopia* | *Self-employed*

- Founder and lead engineer of a platform that connects a team's existing computers into one private AI. In active development.
- Building Go agent and coordinator services with REST and WebSocket APIs, and a scheduler that routes each request to the best available machine.
- Run open LLMs locally with llama.cpp, streaming responses token by token; built a live PostgreSQL and Next.js dashboard showing each machine's CPU, RAM and status.
- Security by design: outbound-only connections (no open ports), token-based enrollment, checksum-verified models.

  Technologies: Go, llama.cpp, PostgreSQL, Next.js, WebSockets

Founder and AI Product Engineer, Bedebo

Dec 2025 – Oct 2026 | *Addis Ababa, Ethiopia* | *Self-employed* | *bedebo2.vercel.app*

- Built an AI study workspace for Ethiopian university students from concept to launch. Live with 50+ users and 5 paid upgrades.
- Built document processing for PDF, PPT and DOC files and RAG-based Q&A over each student's own materials.
- Implemented AI-generated study guides, summaries, quizzes and flashcards, with a bilingual learning experience.
- Owned the full stack: Supabase authentication and database, backend services, payment and subscription features.

  Technologies: TypeScript, Next.js, Supabase, Prisma, PostgreSQL, RAG, DeepSeek API

Developer, Amani Solutions

Mar 2026 – Aug 2026 | *Addis Ababa, Ethiopia* | *Internship*

- Built a data ingestion pipeline that cleans and normalizes raw SACCO financial data into a structured PostgreSQL schema.
- Developed the API layer on top of the processed data so downstream services can consume clean, reliable records.
- Worked within a cross-functional development team.

  Technologies: Python, PostgreSQL, SQL, REST APIs

Junior Software Developer, Buddy Athletics (US sports startup)

Sep 2025 – Jul 2026 | *Remote, Texas, US* | *Contract*

- Shipped full-stack features for the company's website and web app with a US-based team.
- Worked on the dashboard: FastAPI backend, UI component updates and raw PostgreSQL queries.
- Fixed bugs and optimized performance across the frontend and backend.

  Technologies: TypeScript, React, FastAPI, PostgreSQL

Junior Software Engineer, Multiverse Enterprise PLC
Jun 2025 – May 2026 | Addis Ababa, Ethiopia | Part-time

- Designed and built the company website from scratch, and a vehicle and user management system with registration, monitoring and an admin dashboard.
- Provided IT support across departments and worked directly with management on digital strategy and content planning.
- Created daily LinkedIn and Facebook content for the company.
  Technologies: TypeScript, Next.js, PostgreSQL (Neon), Vercel

Web Developer, Cardinal PLC
Jan 2026 – Feb 2026 | Addis Ababa, Ethiopia

- Developed the official magazine-style website with a publishing-friendly content layout.
  Technologies: Next.js, TypeScript, CMS

Web Developer, AgroCore Solutions PLC
Jan 2025 – Feb 2025 | Addis Ababa, Ethiopia

- Built and deployed the company website with uptime monitoring.
  Technologies: Web, Deployment, Monitoring

FEATURED PROJECTS

HULU_Code | Local-first AI codebase navigator (live)
Problem: As a student I could not understand unfamiliar codebases; READMEs explain installation but not how endpoints and files connect.
Built: Scans a project locally, maps relationships between files and symbols, flags which files are safe or risky to change, and answers questions about the code. Privacy by design: only structural metadata syncs, never source code.
Technologies: Go, TypeScript, Next.js, NextAuth, Docker, RAG, DeepSeek API

School Management SaaS | Multi-tenant platform with local payments
Problem: Most payment tutorials cover Stripe, not Ethiopian payment providers.
Built: Learned Chapa from its documentation alone and built a secure ETB payment flow with webhooks, role-based access control and multi-tenant subdomains.
Technologies: Next.js, TypeScript, PostgreSQL, Chapa

Tigil Reports | AI business reports for Ethiopian companies (live)
Problem: Staff lose hours turning raw business data into the weekly reports managers ask for.
Built: AI-generated business reports from raw data, with Chapa payments and Better Auth authentication.
Technologies: Next.js, TypeScript, Supabase, PostgreSQL, Better Auth, Chapa, DeepSeek API

ENGINEERING PRACTICES

- **Security by design:** outbound-only connections, token enrollment and checksum-verified models (Mesob AI); webhooks and RBAC (payments)
- **Data and databases:** schema design, raw PostgreSQL, ingestion and normalization pipelines
- **Independent learning:** picks up unfamiliar tools from official documentation, for example Chapa payments, and ships a working version
- **Workflow:** Git and GitHub for all projects, Linux and Docker, uptime monitoring on deployed sites

EDUCATION

Ethiopian Public Service University (EPSU), Ethiopia | Currently studying
Self-taught software development through independent learning, official documentation, practical projects and freeCodeCamp.
